September 30, 2010

I have studied the Executive Summary of the intended Tri-Continental Atlantic Campus of the Universities of las Canarias. It is a well-conceived and most exciting proposal that exploits the unique environment of the Islands. The primary areas of focus: Marine Science, Astrophysics and Biomedicine are especially appropriate, as explained in the Summary. As you know, I have participated in two Editions of the Campus of Excellence, one in Fuertaventura, the other in Gran Canarias. These events were carefully structured to engage young researchers from all three continents with distinguished Spanish and international mentors. The present proposal is at a far grander and more ambitious scale. If implemented, it will integrate the scientific activities of students and faculties of both participating Universities with the wider international community and the business sector of the Canary Islands. It will enable new and significant contributions to Education, Science, Technology, and can foster a coherent approach to the severe problems of Global Sustainability. I strongly support this initiative and would look forward to participating in its activities.

Sincerely,

Sheldon L. Glashow
Nobel Laureate
